

# Realising the Software-Defined Vehicle

British Motor Museum, Gaydon | Thursday 11<sup>th</sup> July 2024

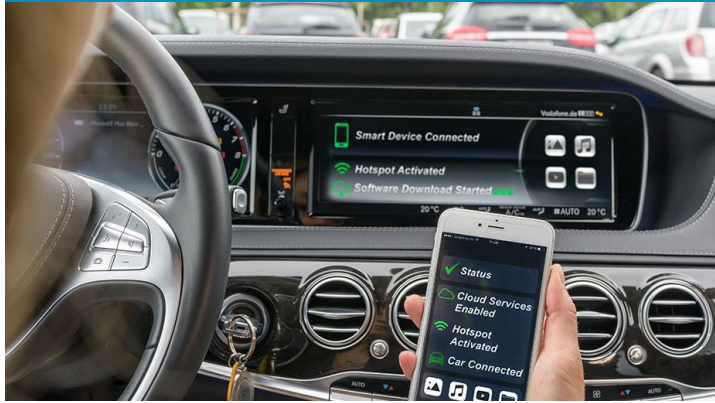

**Collaboration**  
in a technology  
rich era

Gaydon | 11<sup>th</sup> July 2024

# Where is the Software-Defined Vehicle going? And how does it get there?

## Connected

## Automated

## Electrified

**\*NEW\*** Driver features installed and started during runtime

## Shared

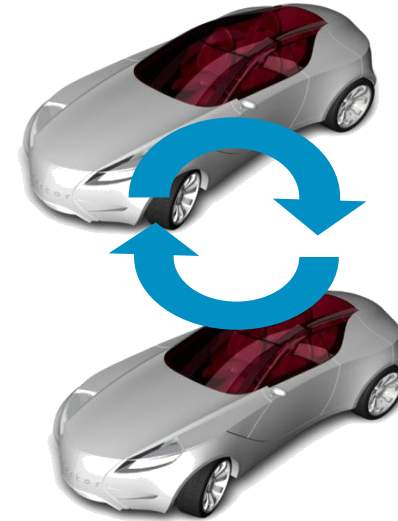

## What's Under The Bonnet?

Single electronic systems

Complex internal control systems

Complex external networks: V2V, V2x

1990

2010

2020+

1 ECU → 5 ECUs → 25 ECUs → 50 ECUs → 100 ECUs → **Less?**

Evolving E&E Architecture → Functional Domains → **Zonal Domains**

CAN → MOST → LIN → FlexRay → Eth/IP → **SOME/IP**

4 bit → 8 bit → 16 bit → 32 bit → **Multi-Core**

# What is a Software-Define Vehicle? Beyond the Buzzwords!

## What is a Software-Define Vehicle? Old Skool vs. New School

### Traditional Vehicle

- ▶ **Business:** A model encouraging purchase of the latest model every few (~3) years
- ▶ **Ecosystem:** Single dimension value network from suppliers to end customer product (Component Supplier → Tier-2 → Tier-1 → OEM)
- ▶ **Architecture:** Deeply integrated E&E architecture optimised for minimal BOM cost. Focus on freezing at POS then “big-bang” release each MY
- ▶ **Processes:** Dictated by mechanical and infrastructure constraints. High effort on planning and predication to minimise later costs due to late changes and quality issues
- ▶ **Driver Features:** Locked in at design and delivered at production. Innovation delivered “off-the-line” via styling, power, look-and-feel

### Software Defined Vehicle

- ▶ **Business:** Constant value delivery through new services; expectation of continuous improvement
- ▶ **Ecosystem:** Multi-dimensional business network with multiple avenues of revenue through further products, services, data and other assets
- ▶ **Architecture:** Modularised E&E architecture with redundancy for possible future use-cases and continuous evolution and release
- ▶ **Processes:** Fast feedback loops facilitated by continuous deployment and evaluating response (CI/CD, DevOps). Focus on experimentation (even in-field) and continuous learning
- ▶ **Driver Features:** Improved over the vehicle lifetime via OTA updates. Innovation via new features delivered to ADAS, Infotainment, Security etc.
